

ELMIWAVE SELECTIVE SOLDERING MACHINE

SKU: 149306B

The Soldering and Desoldering Machine ELMIWAVE is the ideal equipment for any rework or production line.

Thanks to its special nozzles, designed directly on request, ELMIWAVE produce a tin wave that "wet" only the PCB areas that need to be reworked.

ELMIWAVE replaces expensive point-to-point soldering operations with one quick and easy selective soldering procedure. The rapid nozzles replacement and the wide range of settings available (X, Y and Z Axis, Temperature, Height of the tin-wave, time of the erogation of the tin-wave) enable ELMIWAVE to work and rework any PTH component.

We can produce nozzles of any size or shape we only recommend to consider that for each size you have to add 2mm.

Built in titanium, ELMIWAVE is RoHs compliant and can operate with Lead-Free alloys.
